ANNUAL REPORT OF RESEARCH FACILITY

1. Registration No.
84-F-0001

FORM APPROVED
OMB NO. 0579-0036

2. HEADQUARTERS RESEARCH FACILITY (Name and Address, as registered with USDA including zip code)
USDA, APHIS, WS, NWRC
4101 LaPorte Avenue
Fort Collins, CO 80521
(970) 266-6000

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets if necessary.)

FACILITY LOCATIONS (Sites)

See Attach #1

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in those animals and the reasons such drugs were not used must be attached to this report)	F. Total No. of Animals (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Mountain Beaver	22	0	0	0	0
Black Tail Deer	35	35	0	0	35
White Tail Deer	11	0	0	0	0

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report in addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Summary of exemptions to the animal welfare act

1. The Animal Care and Use Committee approved an exemption to the animal welfare act which allows an investigator working with ground squirrels to restrict access to food but not water for 1-7 days in these animals. The goal of the study is the molecular and hormonal mechanisms that allow ground squirrels to adapt to lack of food intake in preparation for hibernation. An excerpt of the justification provided by the investigator is included below.

Justification for controlled access to food.

The genus *Spermophilus* includes many ground squirrels that undergo periodic bouts of torpor usually during the winter hibernation period. These animals fatten for winter hibernation throughout the summer and early fall, and then voluntarily cease to feed for a period of nearly 7 months. During this period, their metabolism must undergo some very extraordinary changes: with no food intake, the gut must change and the metabolic pathways that provide nutrients to the various tissues must also account for the lack of food intake. We know that fats become the dominant fuel source during most of the winter and particularly at low tissue temperature. But other fuels are important (Buck and Barnes, B. Am. J. Physiol. 279: R255, 2000) and it is known that long term fasting by these mammals and birds can be characterized by three phases (Y. Cherel and Y. Le Maho, Am. J. Physiol. 249: R387, 1985). The exact changes in cellular metabolism have not been elucidated at the molecular level during these fasting phases.

The question the ACUC committee will undoubtedly have is whether one is justified in allowing this mammal to fast for nearly a week. I believe the experiments are justified for the reasons and rationale cited above and the following: 1) Several fasting studies have been performed on ground squirrels that are hibernators and no deleterious effects other than body mass loss (which is what most were studying) were observed (References: Anderson et. al. Fatty acid synthetase in control, starved and refed Richardson's ground squirrel. Comp. Biochem. Physiol. A 93 (3): pg. 613-6, 1989; Carey, H. Effects of fasting and hibernation on ion secretion in ground squirrel intestine Am. J. Physiology 263: (Rr) 203-8, 1992; Andreas et.al. Hibernation reduces pancreatic amylase levels in ground squirrels. Comp. Biochem. Physiol. Vol. 134,3: 573-578, 2003); 2) During the summer, ground squirrels routinely do not eat periodically due to weather, drought, and other maladies that arise in their environment (G. Michener, The Biology of Ground-Dwelling Squirrels, 1984) Thus, the stress of at most a 6-day fast will not cause death in the animal. In point of fact, many of the fasting studies that contrast active summer animals to winter hibernating animals are flawed because the lack of food intake in the winter can alter so many metabolic parameters. Animals in the summer should be at least partially fasted when comparing energy fuel utilization between the two states.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, the summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
